Art.-No. 551 167 – Edition 06/24

Perfect edge protection in a few easy steps

1. Select Schlüter-RONDEC, -QUADEC, -JOLLY, -FINEC and -FINEC-SQ according to tile thickness.
2. Using a notched trowel, apply cementitious tile adhesive over the area where the profile is to be placed. For outside wall corners, tile one wall first; then apply the adhesive to the corner area of the second wall.
3. Press the trapezoid perforated anchoring leg firmly into the bed of tile adhesive and align. Trowel additional tile adhesive over the leg to ensure full coverage and support of the tile edges.
4. Firmly press the adjoining tiles into place and adjust them so that the tiled surface is flush with the top of the profile. All tiles must be fully embedded in the tile adhesive.
5. Abut the tile to the integrated joint spacer to ensure a uniform joint of 1.5 mm. For stainless steel profiles, leave a joint of approximately 1.5 mm. Fill the joint cavity completely with grout.
6. Matching corner pieces are available for inside and outside corners. They allow for a fast, clean installation without mitre cuts.

The choice is yours! MyDesign by Schlüter®-Systems

Design your Schlüter products in your favourite colour or in your company's corporate colour. Implement your colour preferences with MyDesign by Schlüter-Systems!

An assortment of Schlüter profiles can now be ordered in 190 colours of the RAL Classic chart – with selections including golden yellow, emerald green and blue grey. Customise your Schlüter products to your exact colour specifications.

Whether your project involves a kitchen in corporate design colours, a bathroom in your favourite colour or an outdoor area with colourful finishing profiles – the choice is yours!

Edge protection for tiled walls

Schlüter Wall Profiles

Profile: Schlüter®-FINEC-SQ

Walls with decorative profiles

The manufacture of ceramic tiles with glazed edges is not common these days. The consequence: the grey or brown body of the tile is visible at the outside corners of walls or at the edges of skirting and transitions to other coverings, thus spoiling the otherwise beautiful appearance of a tile installation. This is where the Schlüter-RONDEC, -QUADEC, -JOLLY, -FINEC and -FINEC-SQ finishing profiles come in. These profiles provide decorative edging while protecting corners and edges effectively from damage. In addition, the profiles can be combined with border profiles by Schlüter-Systems in matching colours.

Functionality and design

Profiles from Schlüter-Systems create highly durable and decorative finishing edges for wall coverings and skirtings in tile and natural stone. With the numerous material and colour options available, there are no limits to creativity with these profiles. Whether matched to tile and grout colours or for an interesting contrast. The profiles protect the edges from damage. You can also create transitions, corners or skirtings with other covering materials such as carpet or parquet.

Schlüter®-RONDEC

Metal borders with Schlüter-Systems

Using the decorative Schlüter-DESIGNLINE and QUADEC-FS border profiles, you can create designer accents. These profiles are also superbly suited for putting the finishing touch to washbasin units, bars and kitchen worktops. DESIGNLINE is available in stainless steel, chrome plated brass or anodised aluminium. You can choose between a variety of finishes. DESIGNLINE can be combined with Schlüter-RONDEC and QUADEC profiles in the same finish to create external wall corners. QUADEC-FS can take a covering material – e.g. a glass mosaic – between two 10-mm visible surfaces, thereby creating special accents.
